

Meeting March 21 2024

Thursday, March 21, 2024

1:54 PM

Generate the uncertainty plot from a single task GP and compare that with a multi-task one

How different are the four groups used in the multi-task training

Include the groups with 30 data points

Potentially include datapoints with different resolutions but same dimension of features

Test the threshold of train, test split

Why train not much better than test

Rank the performance of formulation from best to worst

Uncertainty plot should be shaded

Start the uncertainty plot from 0, visually the uncertainty would be much better
